

BDRP Mid-Presentation Feedback Questions

December 16, 2025

Feedback Questions

1. What papers are you referencing?
2. What is Akash's physical theory/model?
3. How do we generate the dataset?
4. Why are you choosing Burger's equation?
5. What are we trying to simulate?
6. What are the current limitations in related papers? What approaches are they trying?
7. Related work - Any similar simulation?
8. What about accuracy benchmarks? (Note: Increase speed, decrease accuracy trade-off)
9. What kind of initial conditions are you using?
10. What distributions are you using?
11. Use the same notation for everything → Bigger figures
12. Compare your architecture vs NFTM
13. What is the main conclusion per model?
14. Show loss graphs
15. What is the absolute training error? Is it happening during training?
16. Akash → Show training error, should be almost perfect
17. Show the physical analogy
18. For the context window → 5 timesteps & at least 2-3 viscosity values for training
19. Related work always - What is the current state of the art?
